LuxHome

Wireless Garage-Shed-Caravan Alarm System

System Operation

The Alarm System is Armed/Disarmed from the Remote Control Only, simply exit your Mobile Home and press ARM on the Remote Control and the Bell Box will respond with "Beep" and when you return press DISARM and the Bell Box will respond with "Beep, Beep".

Bell Duration, the alarm will sound at 120db for 3 Minutes for each Alarm Trigger, more than enough time to scare away a Burglar, without causing too much noise pollution to your neighbours.

Low Battery, each detector (PIR and Contact) will give a visual indication of low battery, once this is done the batteries need changing within 2 weeks.

Questions and Answers

Q: How long do the batteries last?
A: Bell Box - Up to 10 Years , PIR - Up to 2 years, Door/Window Contact - Up to 3 Years, Remote Control - Up to 3 years (all based on activity and use)

Q: I have been told that the UK does not get enough sunshine for Solar Bell Box's, and that they are no good for our climate, is this True?
A: No this is not true, Solar in this case means Infra-Red Energy, for every day the Alarm Stores enough power for 30 days, the Bell Box only draws a small amount of voltage for the Flashing LED,s and the Solar Panel is rated to last 10 years + active life.

Q: I have been told that Wireless Alarms are prone to false alarms, caused by Taxi Cabs, Mobile Phones and other wireless equipment and will be forever going off, is this true?
A: No, this has not been the case for the last 10-15 years, modern wireless alarm systems use Smart wireless signalling and are just as reliable as there hard wired counterparts.

Q: Can the Alarm system be Jammed/Blocked or scanned by a Burglar?
A: Government Agencies may have access to the equipment needed, but for 99.9% of the rest the answer is NO. The Alarm uses a Pulsed, 128bit Encrypted Wireless Signal with over 42,000 combinations on a Random Rotation.

Q: How many Detectors/Remote Controls can I add to the alarm system?
A: In theory there is no limit, but as the System has only one security zone, we would recommend no more than 10 at most, for remote controls you can have as many as you like.

Q: Does the Alarm have a Part Arm function, so I can use the alarm when I am in bed, IE Upstairs Off and Down Stairs ON?
A: There is no Part Arm on this system, why not get an extra Remote Control, and leave it in your bedroom, the result is the same.

Q. Does the Alarm Bell Box have Flashing LEDS to indicate it is real?
A. Yes, 2 x RED LED's that Flash Alternatively, offers a great visual Deterrent.
